### Company description

SkylineDx is a pioneer in the field of molecular diagnostics through developing and commercializing array-based diagnostic tests using gene signatures for personalized medicine in oncology that helps to provide physicians and patients with the best individual care possible. At SkylineDx we transform life sciences into the daily practice of clinical diagnostics. SkylineDx has a dedicated team with unique expertise and the technology needed for a highly efficient identification of novel relevant biomarkers, development, registration and commercialization of (companion) diagnostics. Our mission is to improve therapeutic treatment selection through the development of reliable, clinically validated molecular diagnostic tests for blood cancers and thereby improving the quality of life of blood cancer patients. As an innovative company, SkylineDx is continuously seeking for ambitious colleagues with an academic and/or industrial background that are passionate about our mission.

### Job description

The technician will be responsible for the analyses of the patient specimens for diagnostic services as well as for execution and reporting of investigational and validation studies for the products in development. These analyses include various molecular techniques, e.g. flow cytometry, RNA/DNA isolation, PCR as well as running the (diagnostic) microarrays. He/she should have a strong interest and experience in molecular and cellular biology. Experience in working under quality systems like ISO-13485 and ISO-15189 (or CCKL) and experience working with patient samples, flow cytometry and the Affymetrix GeneChip® 3000Dx v2.0 systems are a plus.

### Profile

We look for professionals with a strong quality attitude interested to work in a dynamic surrounding in close collaboration with academic partners, but at the same time meet the challenges of a rapidly expanding company with commercial interests. We expect our employees to be flexible and enjoy working in a fast moving multidisciplinary environment. Education HLO or comparable.

### We offer

SkylineDx offers you to become part of our challenge to translate state-of-the-art scientific achievements into diagnostic products that will contribute to improve patient care. We are a young and dynamic company offering excellent opportunities for personal growth and development. Skyline is well embedded in the infrastructure of the Hematology and Bioinformatics Departments of the Erasmus MC in Rotterdam, the Netherlands. Therefore we believe the company can offer you the best of both worlds; a career in life sciences with emphasis on product development and clinical diagnostics in close collaboration with an academic environment. We offer a full-time position with an attractive salary, 25 holidays and travelling expenses compensation.
